DETAILED ACTION

Response to Amendment

1. Applicant's explanation of the instant invention in pointing the difference with the cited prior art was found to be persuasive.

EXAMINER'S AMENDMENT

2. In view of allowable subject matters, the Applicant's representative was contacted for canceling the nonelected claims.
3. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Robert W. Griffith on March 10, 2006.

The application has been amended as follows:

Claims 22 and 23 have been cancelled.

Allowable Subject Matter

4. Claims 1 – 21 are now allowed.
5. The following is an examiner's statement of reasons for allowance:

Claims 1 – 17 recite, inter alia, a method for performing a wire – bonding operation in an integrated circuit, utilizing a bonding tool. A wire is ball bonded to a first bond site in the integrated circuit. At least one bend is formed in the wire. The

wire is terminated at the second bond site, thereby creating a bonded wire having a profile. The ball bonding, forming and terminating steps are repeated for at least one additional wire in the integrated circuit such that the profiles of at least two bonded wires in the integrated circuit are substantially perpendicular to one another at a crossing point thereof. The art of record does not disclose or anticipate the above limitation in combination with other claim elements nor would it be obvious to modify the art of record so as to form a device including the above limitation.

Claims 18 – 21 recite, inter alia, an integrated circuit comprising an integrated circuit package, a plurality of circuit elements disposed within the integrated circuit package, a plurality of bonded wires, wherein each of at least a subset of the bonded wires is ball bonded at a first bond site and terminated at a second bond site to create a corresponding profile, and wherein the profiles of at least two bonded wires are substantially perpendicular to one another at a crossing point. The art of record does not disclose or anticipate the above limitation in combination with other claim elements nor would it be obvious to modify the art of record so as to form a device including the above limitation.

Conclusion

6. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Art Unit: 2891

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Secker, US 6,538,336 and Masumoto, US 2003/0205725 teach semiconductor devices with the profiles for the wire bonded wires.
